QUANTITATIVE VENTILATION PERFUSION LUNG SCAN

INDICATIONS:

Right pseudomyxoma lesions right upper and middle lobes. Pre-op for pneumonectomy.

TECHNIQUE & FINDINGS:

After the intravenous injection of Tc 99m MAA, anterior and posterior perfusion images of the lung were obtained. Using a geometric mean method, percent perfusion to each lung zone was calculated and is as follows:

	Left Lung	Right Lung
Upper lung zone	11	4
Middle lung zone	30	26
Lower lung zone	15	14
Total	56	44

IMPRESSION:

Large area of diminished perfusion in the right upper lung zone.
